PROJECTS

Tender Management System

The “Tender Management System” is a technologically advanced solution designed to replace the existing manual and paper-based tender management process. This proposed system leverages modern technology, specifically Django Framework for front-end development and Sqlite for backend database management.

Organizations can create and publish tender announcements through the system’s web-based interface. They can input project details, requirements, deadlines, and supporting documents electronically.

SKILLS

Python | Django framework | SQLite | MySQL | Statistics | Machine Learning | Wordpress
